

I am

Diabetic  
Patient

I'm trying to

avoid loss of vision by  
detecting a common  
complication of Diabetes,  
Diabetic Retinopathy in early  
stages.

But

it is not  
reliable

Because

manual diagnosis is time  
and cost consuming and  
also prone to misdiagnosis  
due to human mistakes.

Which makes me feel

to be afraid of  
loss of vision
